

A young enthusiastic web designer with a keen eye for design and detail. While studying at the University of York, I developed a passionate interest in web design when I was offered the opportunity to re-design the web site for the university music magazine (circulation-mag.com). Since then I have taken on various other freelance web projects using HTML 5, CSS 3 and Javascript/ jQuery, and am currently working for Wyndham Vacation Rentals UK, developing sites such as cottages.com and Hoseasons. During that time I have vastly improved my skills, particularly in design, and am always looking for new challenges and wanting to learn more.
